

PigCHAMP › Knowledge Center

Take your farm data to a new level.

PigCHAMP is now providing a web-based service enabling users to access Benchmarking, Statistical Process Control (SPC) charting, and dashboard gauges. We're introducing the ability to monitor farm productivity from anywhere you're connected.

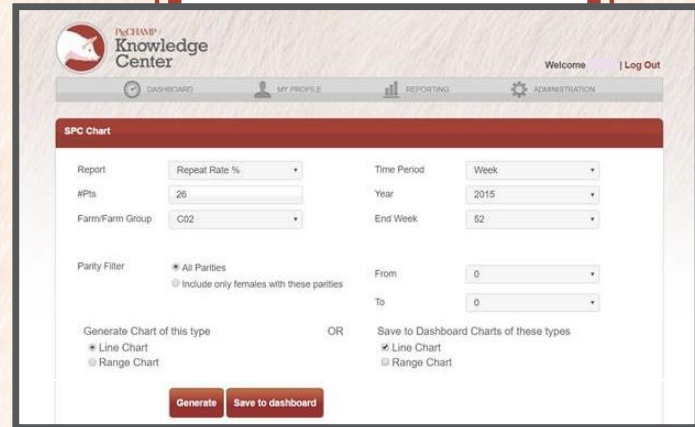

The PigCHAMP Benchmarking allows for the comparison of key industry attributes against the global PigCHAMP database, by size, geography, parity or operation.

The Knowledge Center provides the ability to create a personalized "dashboard" where users can choose several production attributes to automatically populate on their homepage with the information most useful to them. Now you can make real-time decisions for each individual farm.

Features

PigCHAMP Knowledge Center offers several unique features including:

- Easy access by anyone in the organization via the web
- Compare data globally by various demographics
- Live performance analysis through a customizable dashboard
- Automated, aggregated data uploaded daily
- Allied industry, academia and other partners can have access to information related to their respective interests
- Benchmarking free to all PigCHAMP users
